REASONS FOR ALLOWANCE

1. Claims 1-15 are allowed.
2. The following is an examiner's statement of reasons for allowance:

As per Claims 1, the applicant correctly points (see page 12 of 15 of REMARKS) out that the operational amplifier of Wagner is not a part of a precision rectifier circuit, as in the claimed invention, where the op amp has an input connected to a sensor pad. The amended claims 6 and 11 have been amended to include the limitation of the particular precision rectifier in the moisture sensor.

Therefore, the prior art fails to anticipate or make obvious in combinations a moisture sensing apparatus with sensor pads driven by conductive rings, further comprising a precision rectifier comprising:

an operational amplifier having one input connected to the pad, another input, and an output;

a first diode connected to the output of the operational amplifier and in a feedback loop between the operational amplifier output and the other input of the operational amplifier to nullify variations in the rectified signal that are due to temperature induced variations of diode parameters, the first diode having an output for supplying a rectified signal that is a monotonic function of moisture content of material that is in contact with the sensor; and

a second diode connected between the output and the other input of the operational amplifier for reducing output errors; and

the operational amplifier being operative to obtain a difference between input signals.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
